

## Shock and Temperature Monitor and Logger

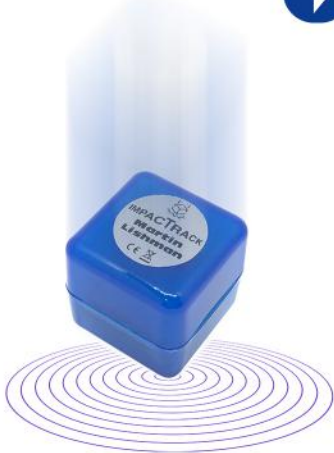

*Monitors damage to fresh produce caused by transport and handling  
Helps reduce food waste and improve quality control*

- Locates production and transport damage causes
- Shows impact and temperature readings instantly
- Stores readings for assessment after transport or handling
- Can mimic the size, shape and density of almost any produce

Carrier shells available to match the shape, size and density of the real produce being monitored

## Application areas

- Reducing waste in food and fresh produce production
- Temperature monitoring of transport and logistics
- Quality control of handling, grading and packing systems

## Key Benefits

- Easy data capture with Bluetooth
- Simple to use ML Sensing iOS or Android app
- Graphical or tabular data display and email facility
- Up to 6 months battery life
- Over 10 years data storage without battery
- No operating costs

## Optional

- Carrier shells to match exact product specification including waterproofing and buoyancy
